PROFESSIONAL SUMMARY

Full-stack software engineer and Master's student in Computer Science at NC State with experience building end-to-end systems across backend APIs, frontend interfaces, and distributed architectures. Skilled in Python, Go, Node.js, and React.js with a strong foundation in automated testing, CI/CD, and secure API design.

EDUCATION

North Carolina State University

Master of Computer Science

May 2027

Raleigh, NC

• **GPA:** 4.0/4.0

• **Coursework:** Design and Analysis of Algorithms, Software Engineering, Automated Learning and Data Analysis, Object Oriented Design and Development, Internet Protocols, Neural Networks

Mukesh Patel School of Technology Management & Engineering

Bachelor of Technology, Information Technology

May 2025

Mumbai, India

• **GPA:** 3.45/4.0

EXPERIENCE

Ultimate Scaler Pvt. Ltd.

Dec 2024 - May 2025

Product Development Intern

- Built backend components for an automated trading platform using Python and KiteConnect APIs to support real-time market data ingestion.
- Architected and implemented a Data Logger Unit (DLU) to capture, store, and organize tick-level market data for historical analysis and backtesting.
- Evaluated automated trading strategies using EMA, RSI, ATR, Bollinger Bands, and Supertrend indicators to validate rule-based execution logic.

PROJECTS

LeakLens - Real-Time Secret Leak Detection Tool

- Built a Go-based security platform to detect passwords, API keys, JWTs, and SSH keys across CLI, browser extension, and web dashboard interfaces.
- Engineered a modular detection engine combining pattern matching, confidence scoring, and automatic redaction.
- Integrated a BERT-based inference pipeline to identify sensitive information extracted from uploaded videos and images.
- Authored 95+ automated unit tests and secure REST APIs to ensure reliability across application components.

Kairos

- Architected an event-driven backend to simulate live financial markets and automated trade execution using producer-consumer workflows.
- Implemented WebSocket streaming to broadcast simulated market events in real time for concurrent client updates.
- Developed REST APIs for authentication, portfolio management, and market operations with JWT-based authentication.
- Built unit and integration tests with GitHub Actions CI/CD to ensure reliability and maintainability.

EcoBites - Sustainable Food Delivery Platform

- Developed REST APIs for restaurant management, ordering, authentication and eco-reward redemption using Node.js and Express.js.
- Integrated MongoDB with a React frontend to support scalable user and order management.
- Achieved 76% code coverage through automated testing and GitHub Actions CI/CD pipelines.

Expertiza - Open Source Contribution

- Contributed production-quality Ruby on Rails code to the Expertiza open-source platform for peer review and assignment management.
- Authored 200+ RSpec tests validating authentication, authorization, controller behavior, and Single Table Inheritance model relationships.
- Designed comprehensive test coverage for role-based authorization, concurrent team enrollment, and HTTP response contracts.

SKILLS

- **Languages:** Python, Ruby, Java, JavaScript, Go, SQL
- **Frameworks:** Node.js, Express.js, React.js, Ruby on Rails
- **Testing:** RSpec, Pytest, Unit Testing, Integration Testing
- **DevOps & Tools:** Git, GitHub Actions, CI/CD, Docker
- **APIs & Security:** RESTful API, JWT, WebSockets, Secure HTTP
- **Databases:** MongoDB, SQLite
- **Machine Learning:** TensorFlow, Scikit-learn
